MICHAEL BELLA

408 - 717 - 0367 \Leftrightarrow michael.j.bella@gmail.com Cupertino, California 95014

TECHNICAL STRENGTHS

Programming Languages Python, C, LabView, Verilog

Software Tools Eclipse, Git, SVN, Code Composer Studio, IAR, Spice

AWR Microwave Office, CADSoft Eagle, Matlab, JMP

Design Experience Low Power Embedded Systems, High Precision Analog Measurement

Analog Design, PCB Layout, SMPS Design, RF Matching & Amplifiers

Lab Skills Root Cause Analysis, SMD Soldering, Wiring Harness Construction,

PCA Bringup and Debugging, Prototyping, Build Designs from Print

Other Technical Experience I2C, SPI, JTAG, Boundary Scan

WORK EXPERIENCE

Electrical Engineer

Apple Inc. - Hardware Test Engineering

October 2013 - Present

Cupertino, CA

- Design and implement test plans for component and system level testing on iOS and accessory projects.

- Manage test vendors and contract manufacturers to implement all tests and to drive issues to root cause quickly.
- Automate functional testing and data processing tasks using Python.

KLA-Tencor – SensArray Group

December 2011 - October 2013

 $Milpitas,\ CA$

Electrical Engineer

Low Power Embedded System Design - Research & Development

- Rewrote MSP430 family microcontroller scheduling system, sensor interface code, and flash storage management code in order to use a new sensor with our existing system.
- Developed MSP430 firmware to interface with new sensor types being researched for customer applications.
- Worked as part of a team to design a new embedded system architecture to lower power consumption, improve measurement accuracy, increase system flexibility, and increase product reliability.

Test & Calibration Automation

- Wrote Python software to identify process steps and extract critical features from data from data taken in customer processes.
- Developed LabView applications and drivers to automate testing and perform embedded system calibration using test equipment such as Aglient 34410A, 34970A, and 4285A.

KLA-Tencor/SensArray Internship

June 2005 - December 2011

Milpitas, CA

Electrical Engineering Intern

- Debugged and performed failure analysis on low power embedded systems.
- Developed LabView applications to interface with test equipment and embedded systems for automated testing.

PERSONAL & STUDENT PROJECTS

Kite Control System for Wind Power Generation - (www.makathon.org)

2013 - Present

- Developing Python code to detect a kite using openCV and send commands to a Logosol motor controller.
- Designing rigging to control a power kite using a servo or stepper motor.

Bike Light - 1000 lm Headlamp and RGB Taillamp

2012

- Designed and programmed a bikelight controller to perform battery monitoring and control RGB LED arrays.
- Calculated power budget and selected appropriate LED drivers for my application.

Formula Hybrid Vehicle Team - SJSU

2010 - 2011

- Developed firmware for a PIC based battery management system.
- Worked with teammates to debug high power switching converter issues.

EDUCATION

San Jose State University B.S. in Electrical Engineering December 2011
